

## IMPROVEMENTS TO ANALYSIS METHODS FOR INDIVIDUAL GENOTYPING

### ABSTRACT OF THE DISCLOSURE

A method and data processing apparatus for determining the genotype of at  
5 least one individual from a genetic marker using at least one measure of the amount of an  
allele of the genetic marker that the individual are described. The method assigns the  
measure of the amount of an allele to a group, a genotype is then assigned to the group and  
the individual is determined to have the genotype assigned to the group.
